16 Fish 37.47 lbs

Myles & Steve Midgley took first place at Lake of the Ozarks lake weighing in 16 fish total for a whopping 37.47 pounds. They beat out 29 other boats and reported catching their fish primarily on Spinnerbaits. Other key fish came on a large Swimbait and even Topwater! They indicated that their fish were pretty shallow just outside of spawning pockets. On Saturday most of their fish came in the final hour!

Congratulations Myles & Steve!

Lake of the Ozarks 1 saw a field of 30 boats. Many anglers reported a strong Spinnerbait bite, but it seemed like you had to be in the right place at the right time to get bit (at least for me!). Other baits that were key to cashing a check included jerkbaits, crankbaits and the Alabama Rig.

I did not see any fish with bloody tails. The fish were definitely moving around in a pre-spawn pattern in the 55-59 degree water. 119 fish were brought to the scales on Saturday and another 72 on Sunday. 400+ pounds of bass were weighed in overall! Of the 30 boats, 29 were able to put a fish in the livewell.

Several members visited Hillbilly Yacht Club on Saturday evening for big burgers and cold drinks. Thanks to Dave Sona for donating some free cheeseburger meals to the club from his bar & grill!

| Number of Boats | 30 | Water Temperature | Mid to upper 50's |
|-----------------------|--------|---------------------|-------------------------------|
| Number of Fish Caught | 191 | Water Clarity | Stained. |
| Total weight all Fish | 404.36 | Air Temp (Low/High) | Low 45 / High 83 |
| Avg Weight per Fish | 2.12 | Wind / Sky | Light wind & partially cloudy |
| Avg Fish per Boat | 6.4 | Water Level | 655.8 |

1st Annual Pesky Critters Tournament - Lake of the Ozarks

Pesky Critters provides quality service and expertise at a reasonable cost, while remaining abreast of the latest pest control products and methods, as well as state and federal regulations, and guidelines from Environmental Protection Agency. We provide a comprehensive array of services, tailored to your specific needs and the requirements of the setting. Each situation is assessed to determine the safest and most efficient method and products to remedy the pest problem. Sometimes the problem is fixed with minimal or no chemical application.

Inspection We will thoroughly inspect your home or business. The inspection will identify your particular pest problem, conducive conditions for pests, evaluate structural and sanitation issues, and will include recommendation of treatments to prevent and /or eliminate pests.

Initial Pest Service Prevention, elimination, and/or exclusion of pests in residential settings. This service includes identifying the pests that are calling your residence home. We then treat for those pests with directed chemical application inside the home and apply a perimeter barrier around the exterior of the home to prevent insects from re-entering the structure. This includes 1 callback within 30 days if you are continuing to have persistent pest issues.

Quarterly Pest Control After performing an Initial service on your home we can offer you a Quarterly Pest Service at a reduced rate. This warranties your home from many of our areas insects. We perform a perimeter treatment every 3 months to keep those "Pesky Critters" out of your home. In between those treatments if you identify a pest issue we will come back and retreat that area at no additional charge. Treating the inside of your home is optional with this program. When we do the perimeter treatment if you want the interior treated as well just let us know and we will at no additional charge. Making this service optional allows you to not interrupt your busy schedule to be at home for the service.

Initial Rodent Control

Battling mice in your home? Let us come out and locate the entry points and set traps to make them vanish. We can seal the entry points using our exclusion tools and eliminate the mice inside the home at the same time.

Perimeter Treatment

Prevents pests from establishing a foothold at the base of your structure. Treatments include the base of the building and other key areas at the perimeter of a home or business. We have programs for in and out treatments or outside only. We will customize to fit your needs.

Quarterly Rodent Control

After eliminating the rodents in your house the next step is to reduce to population around the exterior of your house. This will prevent mice from being a continual nuisance to you throughout the year. This service can be by itself or included with Quarterly Pest Control for a reduced rate on the combined services.

Termite Protection

We offer 2 options for dealing with or preventing termites from invading your home. We can do a liquid perimeter barrier that kills the termites as they travel through it to feed on your house. This method is initially higher priced but over the long term will be cheaper than termite bait stations.

We also offer a lower chemical impact method by using termite bait stations to attract the termites into the station where we then place a bait that will eliminate the colony as they feed on the bait. These stations are placed approximately every 10 feet around the perimeter of your home. This is a lower initial cost than Liquid Treatment but need monitored quarterly for a small fee. After a few years the cost will be higher overall than a liquid treatment.

Saturday Evening Weenie Roast

We will be having a Saturday night Weenie Roast and Pitching Contest. Bring your own lawn chair, drinks, and appetite. We will supply hot dogs, condiments and chips. Feel free to bring any other foods or desserts if you like. You are welcome to bring your own pitching rod too.

NEW STOCKTON LAKE SPOTTED BASS REGULATION INCREASES OPPORTUNITY

MDC's hopes for the reduction to a 12-inch minimum length limit is to increase spotted bass harvest. In addition to improving the opportunity for anglers who catch spotted bass, this may have a ripple-effect benefit for those who enjoy fishing for largemouth and smallmouth bass, too. The increased harvest of spotted bass has the potential to reduce competition between these three black bass species and, thus, improve conditions for largemouth and smallmouth bass. Four Missouri reservoirs in the southern half of the state with significant spotted bass populations – Truman, Lake of the Ozarks, Bull Shoals, Norfork – are already managed with a reduced spotted bass length limit.

Stockton Lake's 12-inch spotted bass minimum length limit is not included in the 2019 Wildlife Code of Missouri or in MDC's "2019 Missouri Fishing Regulations" summary booklet because the regulation had not been approved by deadline for these publications

The minimum length limit for spotted bass on Stockton is now 12 inches. This regulation went into effect March 1 and replaces the previous minimum length limit of 15 inches.
